The U.S. DOT Work Zone Data Exchange (WZDx) Project

February 26, 2019

Ariel Gold, Data Program Manager, ITS Joint Program Office, U.S. DOT
Todd Peterson, Project Manager, FHWA, U.S. DOT
Nate Deshmukh-Towery, Technology Policy Analyst, Volpe, U.S. DOT
Dani Acosta, Data Scientist, Booz Allen Hamilton
Agenda

• Purpose of Today’s Webinar
• Project Overview
• Project Developments and Updates
• Related FHWA Work Zone Data Activities
• Accessing the Specification
• Next Steps
• Q&A
Purpose of Today’s Webinar

• Provide an overview and updates on the Work Zone Data Exchange (WZDx) project
• Discuss lessons learned
• Describe how to access the v1.1. Common Core Data Specification, contribute comments, and find resources
Project Overview
U.S. DOT’s Data for AV Integration (DAVI) Initiative

• Access to data is a critical enabler for the safe, efficient, and accessible integration of automated vehicles (AVs) into the transportation system. Lack of access to data could impede AV integration and delay their safe introduction.

• U.S. DOT launched DAVI as a multimodal initiative to identify, prioritize, monitor, and – where necessary – address data exchange needs for AV integration across the modes of transportation.

• Through DAVI, we can experiment with new approaches and scale what works via policies, investments, and messaging.
The Local Data Challenge

- The WZDx Specification enables infrastructure owners and operators (IOOs) to make harmonized work zone data available for third-party use.

- Up-to-date information about dynamic conditions occurring on roads – such as construction events – can help automated driving systems (ADS) and humans navigate safely and efficiently.

- Many IOOs maintain data on work zone activity. However, a lack of common data standards and convening mechanisms makes it difficult and costly for third parties – including original equipment manufacturers (OEMs) and navigation applications – to access and use these data sets across various jurisdictions.
Learning from the Open Transit Data Story

A simple specification…

…with a wide range of uses

Figure 2: GTFS sketch

Figure 3: Technology and mapping images
A Federated Front Door to Transit Data

• Now, **basic transit data** is easy to find and use nationwide.

• Transit agencies and their users **continue to collaborate** on the specifications.

---

Figure 4: Map identifying the different locations where basic transit data can be found and used
Can This Be Replicated?

1. Simple, Open Specification

2. Broadly Adopted

3. Saves Lives

Figure 5: WZDx project overview
WZDx Project

Purpose

• Jump-start voluntary adoption of a basic work zone data specification.

• Enable collaborative maintenance and expansion of the specification.

Near-Term Outcomes

• Data producers make an active work zone data feed available using a common, non-proprietary specification.

• Non-government developers use that data in a meaningful way—thus, establishing a minimum viable product of voluntary data exchange for work zone data.

Big Picture Outcomes

• Make travel on public roads safer and more efficient through ubiquitous access to data on work zone activity.

• Validate a repeatable approach to accelerate harmonization of local data sources.

Project Developments and Updates
Version 1.1 (v1.1) of the WZDx specification is now available for IOOs to stand up data feeds: https://github.com/usdot-jpo-ode/jpo-wzdx/blob/master/full-spec/full-spec.md

Once these data feeds are available, OEMs, navigation applications, and others can use the data.

Visit the WZDx project for more information, to set up or ingest a feed, and/or to provide feedback on the specification: https://github.com/usdot-jpo-ode/jpo-wzdx/blob/master/README.md
Lessons Learned

1. Map developers are the primary data users.

2. It’s difficult for IOOs to set up feeds.

3. There are many potential organizations and mechanisms to drive this vision forward.

4. There are multiple potential starting points for generating harmonized feeds.
Can This Be Extended – Iteratively?

Figure 8: WZDx project overview

1. Simple, Open Specification
2. Broadly Adopted

Related FHWA Work Zone Data Activities
Work Zone Data Initiative (WZDI)

Purpose

• Advance development of processes and applications around availability of standardized Work Zone Activity Data (WZAD).
  • WZAD: Digital data on **when**, **where**, and **how** work zones are deployed.
• Create a consistent language for communicating WZAD more broadly across organizational boundaries and throughout project life cycles.
  • In part, the WZAD data dictionary can serve as a backlog of data elements to add to the WZDx specification over time.
Work Zone Data Initiative (WZDI)

**PLANNING / DESIGN**

“Estimated” work zone activity

Data is dynamic, ephemeral

*Uses:*
- Project coordination/scheduling of closures
- Predictive travel times
- Fleet routing
- Anticipated capacity reduction
- Less detail regarding work zone configuration

**CURRENT**

“Actual” work zone activity

Data is dynamic, ephemeral

*Uses:*
- Traveler information
- Work zone management
- Situational awareness
- Inspection
- Asset management
- Contract monitoring
- Automated vehicle navigation

**POST-CONSTRUCTION**

“Historical” work zone activity

Data is static, persistent (“read-only”)

*Uses:*
- Permanent record of prior activity, serving:
  - Performance management
  - Contract monitoring
- May be overlaid with other historical information (e.g., crashes, traffic probe data, etc.) to establish correlation between work zone activity and other operational information.

  • Ongoing Implementation Guide
Accessing the Specification
Basic Terminology

• **Repo** – The project space.

• **Issues** – *Have a question?* Post an issue.

• **Pull Requests** – *Have a suggested change or an addition to the specification?* Submit a pull request.
 Specification Walk-through Outline

1. WZDx Project Main Page
   - Background
   - Participation Roadmap
2. The Full Specification
   - Pull Requests
   - Issues
3. Data Tables
4. Resources for Creating Your Own Feed
5. To Submit a Pull Request and Post an Issue
   https://github.com/usdot-jpo-ode/jpo-wzdx
Next Steps

• IOOs stand up their feeds.
• Determine a mechanism for maintaining and scaling the specification.
• Have comments about the specification? Submit a pull request or post an issue to the WZDx repo at: https://github.com/usdot-jpo-ode/jpo-wzdx/blob/master/full-spec/full-spec.md
• Find out about events and requests for information at: http://www.transportation.gov/av
• Questions? Email: avdx@dot.gov
